

MAMP and WAMP

Turn your laptop into a private web server

CSC 170 Labs – PHP or HTML

- Required for all the next labs: keep using PHP
- If so, install PHP on your own laptop
- WARNING: installation not supported by University IT
- *IS* available on University lab computers
- WHY?
 - ~~Final exam~~ (it's totally optional)
 - Development experience
 - Helpful → CS Majors!
 - Required: CSC 174

LAMP, MAMP, and WAMP

- Software "stack"
- Apache, MySQL, PHP (on a Linux, Mac, or Windows computer)
- Most popular
- Production web servers: download, install, configure – each software
- Developers: find an all-in-one package
 - WampServer: **www.wampserver.com**
 - MAMP and MAMP Pro: **www.mamp.info**

Get Up-and-Running

Steps

1. Download
2. Install
3. Run the software
4. Go to **http://localhost** (make a link on your desktop)
5. Find the "webroot" (make a link on your desktop)
6. Delete the starter files

Then try out **lab10**
